

TREATMENT CHECKLIST

Questions to ask your doctor

Has genetic testing been done for my tumour?

If yes, what were the results?

If no, is it appropriate to have it done? How long will it take to get the results?

What are my treatment options based on the test result?

For my type of cancer, am I eligible for targeted therapy, immunotherapy or chemotherapy?

If chemotherapy is most beneficial for me, what does this mean?

If I am eligible for targeted therapy, please can you explain the differences between targeted therapies?

What are the associated side effects?

Is it possible that my first treatment might stop working and if so, what would be my option then?
